AGYLE INTELLIGENCE: PAPERLESS AUTOMATION

EXCEEDING CONTINUOUS IMPROVEMENT GOALS

USE CASE: A Poultry Processor was looking for a better way to identify and measure continuous improvement initiatives and goals. Since continuous improvement affects profitability and touches all aspects of the organization, the proper solution could make a dramatic impact on an SME.

THE CHALLENGE: Teams were collecting data using paper based processes, but the lack of buy-in due to an in-efficient process was noticeable. When projects were identified, digging into the root cause was time consuming which would off-set the savings from any kaizen type projects.

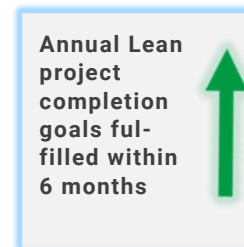

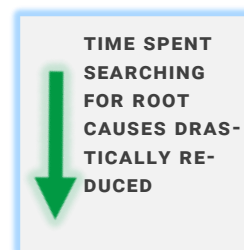

Current Paper Or Excel Forms → Become Paperless Mobile Forms → And Answers Are Automated

Are You Ready To Become Agyle?

www.agyleintelligence.com

THE RESULTS: Agyle digitized paper forms to become accessible on mobile and deployed to various teams across the organization to capture manual inputs on a variety of Lean projects. When a project is identified, the root cause is more easily identifiable for faster project deployment and resolution. Agyle also helps track and report on results in real-time for optimum returns.

The improvements were easily quantified and team buy-in was impressive, a lean culture had been achieved. Kaizen projects were up dramatically and annual project expectations were at over 90% fulfilled within the first 6months.

TIME SPENT SEARCHING FOR ROOT CAUSES DRASTICALLY REDUCED

Annual Lean project completion goals fulfilled within 6 months
