

AGYLE INTELLIGENCE: FASTER INSIGHTS

98% FASTER PRODUCTION INSIGHTS

USE CASE: A Food Processor was looking for faster insights on production processes where paper was being used to track from receiving to shipping. They knew going digital could have an impact on profitability but were not able to find a solution that could scale to meet their unique needs.

THE CHALLENGE: Production teams were using paper to answer questions and then duplicating data entry into excel in order to unlock insights, but the process was slow and could sometimes take hours, days or longer before a decision maker could review and react to issues affecting profits, quality and operations overall.

Are You Ready To Become Agile?

www.agyleintelligence.com

THE RESULTS: Agyle digitized paper forms to make them accessible on mobile and PC. When deployed to users across the organization, their answers instantly became real-time insights in one-simple step, without any need for additional duplicated entry to complete reporting.

Decision makers received automated critical reports on-demand through dashboard or email visuals, trends, alerts and instant notifications for much faster awareness and responses to events.

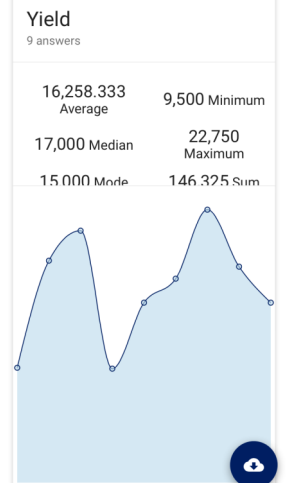

Managers were instantly able to identify and track areas of concern to ensure optimum profitability.
