

MEASURAND | DIGITAL STRATEGY

Background

Measurand Instruments Inc. was growing and facing the challenges that come with supporting multiple technologies spread across disparate systems. The company realized the need for assistance with standardization and the formulation of a long-term Digital Strategy for continuous improvements.

Solution

Measurand commissioned BrunNet IT Solutions to conduct a detailed assessment of the current state of their technology. As part of the process, BrunNet interviewed several key stakeholders to review business strategy and seek their input. The areas included within the scope of the review included:

- Servers and Network Infrastructure
- Backup and Disaster Recovery
- Cybersecurity
- Software
- Workstations
- Printers
- Audio Visual Equipment
- Phone System

A final report was provided to Measurand that documented the current state of their technology, identified issues, and made recommendations for future improvements. The report also assigned a priority and suggested time frame for the proposed recommendations.

Results

Measurand now has a long-term Digital Strategy plan to follow and are confident in their abilities to execute. Several of the recommendations were implemented within the first two months, with productivity gains and collaboration improvements already realized.

"I have worked with BrunNet as a strategic IT partner for several years. As a result of BrunNet's recommendations within the report, Measurand now has an integrated IT roadmap. Staff are easy to work with and knowledgeable."

Lisa Robichaud, Controller
