Case Study 3

Royal Doors

Objective

Royal Door attempted to implement Jonas Construction full ERP Solution. The software was already purchased it, and attempted to implement twice with not success.

Analysis

Revise the current business process for all departments in order to fit with tools included within the Jonas ERP Solution.

Implementation

Frigault Consultant assisted with the implementation as a facilitator between the Jonas Solution team and the Royal Door team.

First, Frigault Consultant would meet with all key employees from each department to identify the current process of information and needs for improvement. With each team, we would restructure the process to accommodate improvements needed and to fit with the Jonas Tools available.

Once the procedure structure would be approve for departments in question, we would then configure the ERP Solution within a test environment. End users would be involved during this testing process. This would give the full team to give their feedback and make changes where needed.

Along with the configuration of the ERP Solution, Frigault Consultant would also assist to mass update the data, including full physical inventory counts. We also created the business forms and reports in order to retrieve the data needed.

Finally, Frigault Consultant assisted in training, support during the go live, and created instruction sheets to facilitate training. Support was also ongoing for a period of time, where modification would be added in order to accommodate exception within the process.
