

CASE STUDY

Sales & Installation Business

Problem

A local Sales and Installation Business was confined to working from the office because it had no remote access to its files. They needed a work from home solution.

In addition, their documentation platform did not allow them to efficiently share files between employees.

They were also on a legacy email system that was not syncing properly across all their devices.

Solution

- Moved the company to a cloud-based solution.
- Full email migration to Microsoft 365 Exchange.
- Full server migration to Microsoft SharePoint and OneDrive to allow for remote access to their files and for easy file sharing when working from home.

Result

Productivity has increased with the company's move to cloud solutions.

Microsoft 365 Exchange has allowed for email sync across all their various devices.

With Microsoft SharePoint, all employees are able to work from anywhere.
