

TECHNOLOGY ROADMAPPING

Case Study

Picture an architect designing the blueprint for your new house. Let the TKS roadmapping experts do the same for your tech projects. Align your tech projects and your strategic direction with confidence and purpose.

PROJECT PLAN

Preparation of Future State - This initial phase involves defining the vision and objectives for a technology roadmap, determining its scope and boundaries, and identifying internal ownership and other key stakeholders.

Plan Development: The specific steps involved in creating the technology roadmap that will close the gaps from current to future and will vary depending on the strategic intent behind it. The final document will provide a visual outline of prioritized tactics and their associated timelines. The technology roadmap will provide a clear picture of how tasks relate to high-level initiatives, and how those initiatives relate to the objectives defined in the preparation stage.

Implementation: The implementation phase includes monitoring progress and performing periodic reviews so that you can revise the roadmap as business needs, product plans, and technologies evolve.
